

Project Brief

## KDOT Column Column Strengthening

Kansas  
August 2005

Columns showed extensive concrete deterioration due to exposure to the elements.

Concrete was repaired and restored on several column locations prior to the installation of Tyfo® SEH 25A. Gaps were left for water drainage, per the specifications.

The installation of Tyfo® Fibrwrap® over concrete repairs is an ideal long-term solution for protection of the repair area. The fiber wrap seals the area and eliminates the possibility of further corrosion. Using the Tyfo® CIS corrosion inhibitor product is another step that increases the longevity of the repair.
