

Project Brief

Burbank Wall

CMU Wall Strengthening

Burbank, CA
2009

CMU masonry wall sections at the Schlegel Studios in Burbank, CA required shear reinforcement as part of a renovation plan to restore the building back to operation after suffering from a fire.

The Tyfo® SCH-41S System, a carbon-base composite with aramid cross fibers, was utilized along the interior and exterior faces of the walls, providing the shear strengthening required.

Fibrwrap Construction was able to mobilize quickly and complete the project in less than a week. The Tyfo® Fibrwrap® Systems are a superior technology that results in time savings, reduced remedial costs, and shutdown time.
